

# Emergency Stop Pullwire Labels

## STANDARDS – AS1755-2000 CONVEYOR SAFETY REQUIREMENT

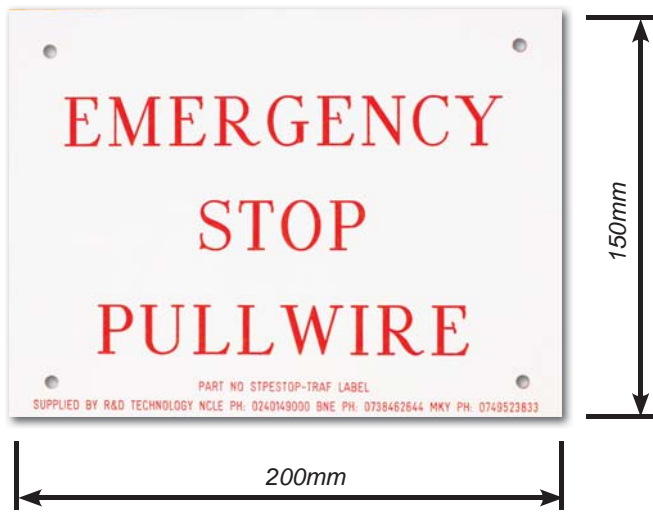

Emergency Stop Pullwire labels are an essential requirement where a pullwire is in use. The Australian Standards™ Conveyors- Safety Requirements AS1755-2000, states in section 2.9.4 Marking and Control Devices, subsection c) that:

*Signs shall be provided at each end and every 30m along a conveyor where a pullwire is used e.g. emergency stop.*

As such, all labels supplied by R&D Technology comply with the Australian Standards™ and are UV stable.

### Traffolyte Sign

Part no. *stpestop-traflabel*  
Order code: LAB-00000222400

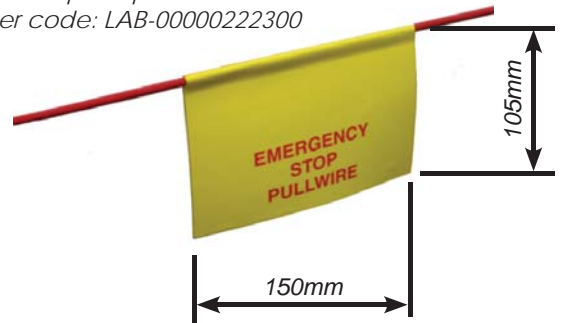

### Traffolyte Sign Attributes

The Traffolyte Sign is made from laminated impact acrylic, making it highly durable. It can be sawn, bonded and drilled as needed. Two predrilled holes are located in the top left and right hand corners, to enhance the ease of installation.

The sign also has the ability to be bent which makes the attachment to rounded surfaces increasingly simple. These product attributes, along with the UV stability make the Traffolyte Sign a reliable, long lasting label for conveyors where a pullwire is used.

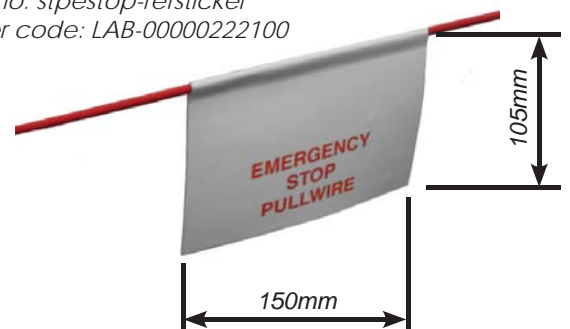

### Standard Sticker

Part no. *stpestop-sticker*  
Order code: LAB-00000222300

### Reflective Sticker

Part no. *stpestop-refsticker*  
Order code: LAB-00000222100

### Sticker Attributes

The Emergency Stop Pullwire stickers can be easily attached to the pullwire by aligning the red line with the pullwire and simply folding the sticker in half. The stickers become increasingly useful for areas where drilling to attach a sign is not an option. Having both a standard and reflective alternative, they are ideal for usage in both above and below ground applications.

# Emergency Stop Pullwire Labels

*Products associated with Emergency Pullwire labels available through R&D Technology...*

Products that may also be purchased are: STP MC, STD-P-VA, STR, LP04-S2 and Terminal junction boxes
